| X. It Cannot Be Determined on a Class-Wide Basis Whether (and to What Extent) Netflix Content Is Streamed Using ISPs That May Be Exempt from Franchise Fees | 45 |

I. Qualifications

1. My name is Steven E. Turner. I am a Senior Managing Director at FTI Consulting, Inc. (“FTI”) and co-lead the Telecom, Media, and Technology Dispute Advisory practice. I hold a Bachelor of Science degree in Electrical Engineering from Auburn University in Auburn, Alabama and a Master of Business Administration in Finance from Georgia State University in Atlanta, Georgia. A copy of my curriculum vitae is attached to this report as Exhibit SET-A, which includes my past testimony.

2. I have worked in the telecommunications industry since 1987 and have extensive experience in many different aspects of the business, including switch engineering, transport engineering, signaling, network operations (including system development), fiber and access network design and deployment, access management, tariffs, sales, billing, regulatory, Internet services, and content distribution over multiple platforms (*e.g.*, copper, coax, and fiber). From 1986 through 1987, I was a Research Engineer for General Electric in its Advanced Technologies Department developing high-speed graphics simulators. In 1987, I joined AT&T and, during my career there, held a variety of engineering, operations, and management positions in both its long distance and local services businesses. These positions spanned the switching, transport, and signaling disciplines within AT&T. From 1989 to 1990, I served as the Quality Assurance Manager for AT&T Network Operations where I was responsible for reviewing outside plant installation and maintenance issues, including the installation and maintenance of fiber optic cable in public and private rights-of-way utilized by AT&T for its network.

3. From 1995 until 1997, I worked in the Local Infrastructure and Access Management organization within AT&T. In this organization, I gained familiarity with many of the regulatory issues surrounding AT&T’s local market entry, including issues concerning the

unbundling of incumbent local exchange carrier networks. I was responsible for designing and engineering AT&T's local networks within the five-state region of Texas, Missouri, Oklahoma, Kansas, and Arkansas. I also participated on the AT&T team that negotiated interconnection contract terms and conditions with then-Southwestern Bell Telephone Company, including unbundled network element definitions and methods of interconnection.

4. From 1997 to 2006, I was President of my own consulting firm, Kaleo Consulting, specializing in providing strategic consulting services to companies regarding where and how to enter various telecommunications markets. I also provided expert testimony in technical and financial areas related to telecommunications. My projects involved resolving contractual terms and conditions disputes and issues that arose between telecommunications service providers, assessing networks and performing due diligence work, estimating universal service funding, and identifying underlying costs for network elements including interoffice transport, collocation, loops (media used to connect to end-user premises), switching, and signaling.

5. Within the same period, from 1998-1999, I also co-founded and served as President for ALT Communications, a Competitive Local Exchange Company (CLEC) in Texas. In this role, we operated the first platform-based CLEC¹ within the state of Texas. My responsibilities included all aspects of the business: sales, service delivery, maintenance, operations, and finance. In 1999, my partner and I sold ALT Communications to Birch Telecom, and I continued to lead the operations in Texas for the next year.

6. In December 2006, I joined FTI and have continued to provide consulting services

¹ “Platform-based” refers to the practice of using a combination of all the Unbundled Network Elements (“UNEs”) available under the Communications Act of 1996 and subsequent Federal Communications Commission (“FCC”) orders and rulings to provide an end-to-end circuit used for telecommunications service.

in the telecommunications, media, and technology industries, with a primary focus on integrated communications. As part of this practice, I lead a team of individuals with exceptional technical expertise in designing, implementing, and operating various types of networks. We have worked with wired (copper, coaxial, fiber, hybrid), wireless (fixed and mobile), and satellite carriers to design specific solutions that provide network access. I also routinely perform technical and financial due diligence projects to evaluate companies' communications service architecture as well as their provisioning and operations practices. I routinely operate as our chief network engineer on technical network engagements and have performed detailed network assessments on over 25 network-related transactions involving telecommunications providers in the fiber, cable, wireless (fixed and mobile), satellite, and tower industries. I am knowledgeable in all of the access technologies that these various carriers utilize including fiber-to-the-home, digital loop carrier, DOCSIS (1.0, 2.0, 3.0, 3.1, and 4.0), and fixed and mobile wireless technologies. I am also knowledgeable in the operation of the transport and data layers within these businesses and have testified as an expert in the operation of networks on many occasions.

7. My consulting assignments regularly involve negotiating interconnection agreement terms and conditions between telecommunications companies and resolving disputes arising from those agreements. These negotiations require a sound understanding of the Communications Act of 1934, as amended by the Telecommunications Act of 1996 and associated FCC regulations, along with a knowledge of state, county, and city regulations. I also stay well abreast of network engineering technology and standards as part of my ongoing work that often involves network design and evaluation, financial forecasts, cost-of-service analysis, and rate development.

8. My prior industry work and continued consulting services provide me with historical knowledge of the development of the integrated communications industry and

regulations. I necessarily keep abreast of new developments, including the regulatory framework within which my clients operate, to maintain my practice. I have provided expert testimony on integrated communications regulation before the public utility commissions of most of the states within the United States (including Texas) and its territories, before the FCC on many occasions, and before the Canadian Radio and Television Commission. I have also provided expert testimony in federal court proceedings and arbitrations involving integrated communications provider disputes. Details related to my expert testimony within the past four years are included in my CV, Exhibit SET-A.

9. I have decades of experience working with FCC regulations and the evolution of those regulations in the cable, Internet, and telecommunications disciplines including extensive experience with the Cable Communications Policy Act of 1984 and the Telecommunications Act of 1996 among others. With respect to the cable industry, I have performed a number of important engagements both in litigation and in diligence assignments, and I am highly knowledgeable on regulatory matters related to the cable industry. I have worked with Altice (in a litigation with Viacom), Astound Broadband, Charter Communications, and Viya. I have also worked with many fiber-to-the-home companies providing linear television programming² using various technologies, including Aureon (Iowa Network Services), Blue Stream Fiber, Hotwire Communications, MetroNet, Northstate Communications, and Telefonica. I have also worked closely with companies that are considered to be traditional telecom carriers but that have deployed various forms of infrastructure to enable the delivery of linear television programming, including Cincinnati Bell, Frontier, Lumen, and Viya. Further, I have worked closely with companies that

² As will be discussed further, the term “linear television” means television programming provided at a pre-set time.

operate in the Internet and content transmission network spaces including Lumen (Level 3) and Zayo. I have detailed knowledge of the various aspects of these businesses not only from a regulatory standpoint but also from a technology and service delivery standpoint. I have been involved in the industry long enough to understand the evolution of the business over time, particularly as it relates to moving large amounts of streaming video content through networks.

10. FTI is being compensated at a rate of \$855 per hour for my services, and the rates for FTI personnel working on this assignment under my direction range from \$250 to \$750 per hour. FTI's fees are not contingent upon the outcome of this matter.

II. Description of Assignment and Summary of Opinions

11. I understand that the City of New Boston, Texas ("City") has filed a putative class action complaint ("Complaint")³ against Netflix, Inc. ("Netflix") asserting that Netflix "should be and [is] required by law to pay [Texas] municipalities a franchise fee of 5% percent of its gross revenue, as derived from [its] providing video service in that municipality."⁴

12. This report sets forth my expert opinion based on information available to me as of the filing of this report. The source files relied upon in my analysis are identified in Exhibit SET-B. The opinions set forth in this report, which are my present opinions, are based on my review of this information as well as my knowledge, education, experience, and training. The information I rely upon in forming my opinions is consistent with materials I review in my normal course of business.⁵ To the extent that additional documents, data, or other information is made available

³ For ease of reading, I have used short citations in my report, but the full citations for FCC documents, court filings and rulings, and federal laws are included in Exhibit SET-B.

⁴ *Complaint*, ¶ 2.

⁵ This includes the materials I relied upon that are referenced in Exhibit SET-B.

to me, I will review such documents, data, and/or other information and may incorporate that additional information learned about the facts or circumstances of this matter into my analyses, conclusions, and/or opinions. I reserve the right to update, supplement, and amend my opinions as additional information becomes available and to provide additional information and opinions regarding the merits of Plaintiff's claims and Netflix's defenses and counterclaims.

13. After reviewing the information in this proceeding, and based on my many years of experience working in the communications space and its associated regulatory framework, I have reached the following conclusions and opinions:

- Netflix does not provide "video programming," as that term is understood in the industry, that is comparable to video programming delivered by a television broadcast station (or cable company). Netflix does not provide channels of content, does not provide content on a linear (*i.e.*, scheduled or pre-set) basis, and does not offer live content. Netflix's content does not include commercial interruptions, and Netflix's service includes interactive features that are not present in broadcast or cable service. Netflix's content is also not disseminated over the airwaves; Netflix users instead request to access and stream the Netflix content they wish to watch, when they wish to watch it, over the Internet.
- Netflix does not provide its content over or through, or otherwise use, wireline facilities that are in any public rights-of-way in the City or in Texas, as those terms are understood in the industry. Netflix does not construct, install, place, maintain, operate, repair, replace, own, manage, work within, occupy, or control any wireline facilities in any public rights-of-way in Texas. Netflix content is instead retrieved by viewers through their separate Internet service provider ("ISP") over the Internet.
- It is generally accepted in the industry that franchise fees apply only to providers that have physical facilities in the rights-of-way of a municipality and deliver video programming over a closed transmission path (*i.e.*, channels that only allow a user to watch the content that the provider chooses to make available). This is how cable service and fiber-to-the-home service operate. Netflix, in contrast, has no facilities in any public rights-of-way, and its content is transmitted over the Internet, which is a necessarily open pathway that allows users to access a wide and vast array of information.
- Netflix does not have "service addresses," as that term is understood in the communications industry. "Service address" in the communications industry generally refers to the location where service is actually consumed or used. Netflix's service, however, is not tied to any particular location or address, and

Netflix customers can stream content wherever they are in the United States and approximately 190 countries so long as they have a capable Internet connection.

- Even if one were to conclude (incorrectly) that Netflix can provide “video service” over the wireline facilities of others, Netflix’s service is often retrieved *other* than through wireline facilities crossing public rights-of-way.
 - Some Texas municipalities lack wireline broadband facilities altogether. As a result, it cannot be determined on a class-wide basis whether there are wireline facilities located at least in part in the public rights-of-way of each Texas municipality through which Netflix content *could* be viewed using an Internet connection provided by an ISP.
 - It also cannot be determined on a class-wide basis whether (and to what extent) the public rights-of-way in each Texas municipality are in fact being used by ISPs for the provision of Netflix content.
 - ◆ There are more than 200 ISPs providing various types of service—including fiber, cable, satellite, mobile, and fixed wireless—to various parts of Texas.
 - ◆ All municipalities in Texas are served by ISPs that offer satellite service that does not use wireline facilities in the public rights-of-way.
 - ◆ All municipalities are served by mobile service providers, and those providers do not or may not use wireline facilities in the public rights-of-way of the particular municipality.
 - ◆ Many Texas municipalities are served by ISPs relying on fixed wireless technology that do not or may not rely on wireline facilities in the public rights-of-way of the particular municipality.
- I understand that video content provided to subscribers of commercial mobile service is not considered “video service.” It cannot be determined on a class-wide basis whether (and to what extent) commercial mobile service is being used by ISPs for the provision of Netflix content in a particular municipality.
- It cannot be determined on a class-wide basis whether (and to what extent) Netflix content is streamed using other ISPs that may be exempt from franchise fees. For example, there are 21 rural broadband providers receiving Connect America Fund Broadband Loop Support, which creates the possibility that interactive, on-demand video programming provided by these ISPs would be exempt from franchise fees, even if franchise fees otherwise applied.

III. Netflix Does Not Offer Video Programming Considered in the Industry to Be Comparable to Programming Provided by Television Broadcast Stations

14. I understand that Plaintiff alleges that Netflix offers “video programming that is comparable to that provided by cable companies and television-broadcast stations.”⁶ Netflix is not a television broadcast station or a cable service. Netflix’s content is not video programming that is comparable to programming provided by a television broadcast station or cable service as that type of video programming is generally understood in the industry.

A. Television Broadcast Stations Transmit Linear, Channelized Programming to All Viewers

15. My analysis begins with an understanding of the type of programming provided by television broadcast stations and cable companies.

16. Broadcast television (sometimes referred to as over-the-air television) is sent out (*i.e.*, broadcast) as radio waves from a network of transmitters and was originally received as analog channels using aerial antennae. Broadcast television was subsequently digitalized, requiring an additional receiving device that could be built into the television or a digital set-top box and that decodes the received signals. Anyone with compatible equipment can receive these types of broadcast signals for free (*i.e.*, without a subscription). Major broadcast channels include ABC, CBS, and NBC.

17. Cable television⁷ relies on satellite technology to receive the television content at a receiver station, and the content is then transmitted to the subscribers’ homes through coaxial

⁶ *Complaint*, ¶ 9, and ¶ 9 fn.1, fn.2, and fn.3.

⁷ CATV, an acronym for “Community Access [or Antenna] Television,” alludes to cable television’s roots as a community-based approach to offering broadcast programming and is now synonymous with the services offered by the cable television industry.

cables and/or fiber optic cables. Cable customers typically require a set-top box to decode and process encrypted digital signals. Comcast Corporation (Xfinity)⁸ and Charter Communications (Spectrum)⁹ are examples of cable service providers in the State of Texas.

B. Unlike Television Broadcast Programming, Netflix Content Is On-Demand, Is Not Channelized or Linear, and Is Made Available over the Internet

18. Television broadcast programming is sent out to all viewers over the airwaves, organized into separate channels of content, and aired at pre-set or pre-scheduled times. Netflix's streaming service does not involve any of these elements: Netflix content is not channelized, is available whenever a subscriber wishes to stream it, and accessed by Netflix members over the Internet.

1. Netflix Content Is Not Channelized

19. The term "channel," from a technical perspective, refers to the specific frequency used to transmit content by a broadcast television station or cable company.¹⁰ This term is also understood in the industry to reflect specific programming made available by a television broadcast station or cable network and delivered across the specific frequency for the channel across all of the channels in the lineup to all users within their service territory. Examples of television channels would be the programming made available by ABC, CBS, FOX, NBC, PBS, ESPN, MTV, and the Discovery Channel. Each channel's content is curated, scheduled, and distributed in a linear

⁸ <https://www.xfinity.com/local/tx.html> last accessed on June 18, 2021.

⁹ <https://www.spectrum.com/services/texas>, last accessed on June 18, 2021.

¹⁰ The definition of "channel" found in the *1996 Communications Act* is as follows: "the terms 'cable channel' or 'channel' means a portion of the electromagnetic frequency spectrum which is used in a cable system and which is capable of delivering a television channel (as television channel is defined by the Commission by regulation)." *1996 Communications Act*, § 602(4).

fashion at a specific time as determined by the television network, and channels often cater to a specific genre (*e.g.*, sports, comedy, news) or demographic (*e.g.*, adults, children) at a specific time. Publications like the “TV Guide” then often identify which television shows, sporting events, or movies are being shown on which channels at what times.

20. Netflix’s service does not provide channels of content at all. Rather, Netflix hosts content on its servers (called Open Connect Appliances or OCAs), and that content is accessible on-demand by anyone with an Internet connection in exchange for a monthly fee. Netflix does not provide a predetermined channel schedule for the content it provides to its subscribers. While Netflix does make available some content that was initially aired on television, that content is not made available at any particular time or only on specific channels. It is instead available when the user desires to watch it, without commercial interruptions, like all of Netflix’s content. Netflix’s service is user-driven, not channel-driven or time-driven as is the case with broadcast television. There is no “TV Guide” or schedule for viewing Netflix content.

2. Netflix Content Is Not Linear, Scheduled, or Curated

21. The term “linear” refers to the fact that television broadcast programming is aired at a pre-set time.¹¹ Without the use of additional equipment, the episodes, shows, or events can only be viewed sequentially and at the pre-set time, with no ability for the viewer to pause, skip ahead, or rewind the content unless and until it has been exhibited and recorded.

22. The programmer, not the user, determines what is sent out on a specific frequency to viewers of linear television. The user then has the option to watch the content on that frequency,

¹¹ The FCC also recognizes that “linear” is generally understood to mean broadcast at a set time: “[l]inear channels offer specific video programs at a specific time of day.” *FCC 2020 Communications Marketplace Report*, ¶ 151, fn. 439. *See also*, “We use the terms linear and pre-scheduled interchangeably, consistent with prior Commission use.” *FCC 2014 MVPD Nprm* ¶ 13, fn. 26.

switch to a different frequency (different channel) to watch different content, or to not watch anything at all. The system is necessarily closed, and the user can only watch what is made available by the programmer at any given time.

23. Netflix users, on the other hand, select what they want to watch, when, and where they want to watch it, on whatever device they choose. A Netflix user can ask to pause, rewind, or fast forward the selected content and can ask to search for and receive additional information about the selected content. Users can also exit the show completely and restart it at any other time or skip episodes in a series and watch only those episodes they desire to watch. Nothing about the Netflix experience is “prescheduled” or “linear” in nature.¹²

24. Netflix also does not provide live content, such as talk shows, soap operas, sporting events, and award shows when they are occurring. Plaintiff’s expert, Mr. Simon, admits that Netflix does not provide live news, sports, live programming, or award shows.¹³ Television broadcast networks and cable providers, in contrast, negotiate deals with groups such as the National Football League, the Olympics, and the Academy Awards to carry these live events. Television broadcast networks and cable providers strive to earn viewers by providing live content that will attract viewers to maximize these providers’ advertising and subscription revenue. This business model is based on the principle of attracting customers to maximize viewership to sell advertising time.¹⁴ Netflix content, in contrast, does not have advertisements, and Netflix does not attract customers based on this type of live programming.

¹² *Simon 5/3/21 Deposition*, p. 86:9-17.

¹³ *Id.*, pp. 85:23-86:8.

¹⁴ *Id.*, pp. 39:15-40:10.

3. Netflix Content Is Requested by Subscribers and Accessed over the Internet

25. A defining characteristic of television broadcast programming is that it is disseminated to viewers over the airwaves by the broadcast station. Netflix, in contrast, is not disseminated over the airwaves. Instead, Netflix users request to access and stream the Netflix content they wish to watch, when they wish to watch it, over the Internet.

26. Access to the Internet is provided by an ISP, which provides users the “capability to transmit data to and receive data from all or essentially all internet end points,”¹⁵ including, for example, all of the results of a Google search, Gmail and other email services, online streaming services like Netflix, Hulu, ESPN+, and YouTube, social media like Facebook and Instagram, and news sources like The New York Times, CNN and FOX News. These online services are sometimes referred to as “edge” or “over-the-top” services: they make data or information available on privately owned servers, and they are all accessed and made available via broadband Internet access service.¹⁶

27. The Internet translates a request for information from the ISP customer and connects that customer’s device to the requested information through what are known as network routers and switches. The ISP provides access to the content using a group of standards that computers use to communicate with each other on the Internet called the Transmission Control Protocol/Internet Protocol (“TCP/IP”) suite. TCP establishes connections between two devices (often referred to as the client and the server) that are attempting to exchange data and ensures that no data is lost when it is transmitted. IP provides for communication across the Internet and assigns

¹⁵ 47 C.F.R. § 8.1(b).

¹⁶ *FCC 2018 Restoring Internet Freedom Order*, ¶ 145 (describing Netflix as an “Over the Top” video service[]”).

an IP address to a device so that data is sent to and from the correct devices. These two systems are what facilitate communication over the Internet.

28. Netflix's service is accessed by Netflix members over the Internet, and Netflix members can access Netflix's service and content simply by having a broadband Internet connection. Netflix content is transmitted to a customer's device over the Internet using a TCP/IP connection from servers called Open Connect Appliances, or OCAs, on which Netflix's library of content is stored. OCAs are located either at Internet exchange Points ("IXPs")¹⁷ or deployed within ISP networks. In other words, OCAs are connected to the infrastructure of the Internet and house Netflix's library of content for Netflix customers to stream over the Internet using their ISP.

29. When a customer selects an episode of Netflix content to watch, a request is sent to an OCA to provide the content that the customer is seeking, and the content is provided to the customer by his or her ISP over the Internet from that OCA using a TCP/IP connection. A Netflix member can choose to stream Netflix content on a wide variety of personal devices connected to the Internet, including computers, televisions, smartphones, tablets, and game consoles, as well as through the Netflix website when using common browsers like Safari, Google Chrome, and Mozilla Firefox. This stands in contrast to television broadcast programming, which is not accessed over the Internet and is instead transmitted over the airwaves at preset times using channels of content.

C. Netflix Is Not a Multichannel Video Programming Distributor

30. The federal regulatory environment regarding television over nearly thirty years

¹⁷ "An Internet eXchange Point (IXP) is a physical location through which Internet infrastructure companies such as Internet Service Providers (ISPs), CDNs, web enterprises, communication service providers, cloud and SaaS providers connect to exchange Internet traffic." <https://www.thousandeyes.com/learning/techtorials/internet-exchange-point>, last accessed June 18, 2021.

has focused on a group of services referred to as Multichannel Video Programming Distributors (“MVPDs”). MVPDs are providers that broadcast multiple channels of video programming to their subscribers. MVPDs in particular have been defined as follows:

A person such as, but not limited to, a cable operator, a multichannel multipoint distribution service, a direct broadcast satellite service, or a television receive-only satellite program distributor, who makes available for purchase, by subscribers or customers, multiple channels of video programming.¹⁸

31. As already discussed, Netflix does not provide channels of content or linear or prescheduled content. The FCC has also expressed that services like Netflix are not comparable to traditional MVPD television services because Netflix “do[es] not provide prescheduled programming that is comparable to programming provided by a television broadcast channel.”¹⁹ In 2020, the FCC stated that “**MVPDs sell channel packages**, which typically include linear channels from cable networks and retransmitted broadcast television stations”²⁰ in which “[l]inear channels offer specific video programs at a specific time of day in a manner akin to broadcast television.”²¹ To the best of my knowledge, the FCC has never taken the position that Netflix is comparable to MVPDs.

32. The FCC, more recently, has adopted the phrase “virtual MVPD” (or “vMVPD”) to refer to online video distributors (such as YouTube TV) that are “[l]ike traditional MVPDs” in that they “offer consumers access to a package of streaming linear channels[,]” but do so “via the

¹⁸ *1996 Communications Act*, §602(13).

¹⁹ *FCC 2014 MVPD NPRM*, ¶ 14 (footnotes omitted). *See also*, the FCC offered an even narrower definition of MVPDs, ruling that the “channel” aspect of multichannel distributors necessarily entails the ownership of the paths of transmission that these channels travel along. *FCC 2010 Sky Angel Denial*, ¶ 7.

²⁰ *FCC 2020 Communications Marketplace Report*, ¶ 151 (emphasis added).

²¹ *Id.*, ¶ 151, fn. 439.

Internet.”²² The FCC, however, does not consider Netflix to be a vMVPD,²³ which further indicates and supports the view that Netflix’s streaming service is not similar to broadcast programming from a technical or operational standpoint.

D. Mr. Simon Is Wrong to Conclude That Evaluating Video Programming Is Based Only on the Content Itself

33. I disagree with Mr. Simon’s extremely limited view of the meaning of the term “video programming.” To Mr. Simon, “video programming” only means “content,”²⁴ and his comparison of content is limited to comparing “format,” “genre” and “quality.”²⁵ Mr. Simon may use the term “video programming” in this manner as a producer of television content, but in the telecommunications industry, “video programming” includes the manner in which content is scheduled (e.g., linear, pre-set) and presented (e.g., channelized).

34. Mr. Simon’s self-defined view of evaluating video programming based only on the format, genre, and quality of the content is also so broad that nothing would likely be excluded. In his deposition, Mr. Simon agrees that there is nothing that would be excluded from his definition of a “format”:

Q. Okay. So when we think about formats, you’re defining it in a way that actually doesn’t exclude anything, like everything counts for purposes of being comparable to television programming?

A. Yes.²⁶

²² *Id.*, ¶ 185 (footnotes omitted).

²³ *Id.*, ¶¶ 176-188.

²⁴ *Simon 5/3/21 Deposition*, pp. 37:23-38:16.

²⁵ *Id.*, pp. 188:16-189:6, p. 261:6-19.

²⁶ *Id.*, p. 200:17-22.

35. Mr. Simon similarly agrees that there is nothing that would be excluded from his definition of genre:

Q. . . . I'm just trying to get a sense of examples of what genre of videos would not . . . be considered comparable under your understanding of what that term [genre] means.

A. I -- I don't think there is anything, that I've listed everything in my report that I think is comparable, and I think in general most of the OTT [over-the-top] program services carry comparable programming, whether it's original or rerun off-network.²⁷

36. Mr. Simon also ignores that Netflix offers formats that cannot exist on broadcast television. In 2018, for example, Netflix released *Black Mirror: Bandersnatch*, a Netflix interactive original powered by videogame programming language. This hour-and-a-half special enables viewers to select their own outcome for the protagonist, resulting in alternative endings of the film. This interactive ability for users to craft their own narrative is a unique capability of streaming services and is not possible on the one-way transmission of broadcast or cable television, in which the same information is distributed to all subscribers.²⁸

IV. Netflix Does Not Have or Use Any Wireline Facilities in Any Public Rights-of-Way in Texas

37. Netflix does not, to my knowledge, own or operate any facilities, networks, or other equipment in the public rights-of-way in the City or in Texas. Netflix also does not provide its content through or over, or otherwise use, any facilities, networks, or other equipment that are in any public rights-of-way in the City or in Texas, as those terms are understood in the industry. Netflix does not construct, install, place, maintain, operate, repair, replace, own, manage, work

²⁷ *Id.*, pp. 214:19-215:4.

²⁸ Netflix offers a dozen such interactive movies and series. <https://www.whats-on-netflix.com/library/interactive-titles-on-netflix/>, last accessed June 18, 2021.

within, occupy, or control any wireline facilities or equipment in any public rights-of-way in Texas. Netflix content is instead retrieved by viewers over the Internet through their separate ISPs, as discussed above.

A. Netflix Does Not Have or Place Any Facilities, Networks, or Other Equipment in any Public Rights-of-Way in Texas

38. I am not aware that Netflix has any facilities, networks, or other equipment located in any public rights-of-way in the City or in Texas.

39. I understand that the Texas Public Utility Regulatory Act (“*PURA*”) authorizes a video service provider to “install, construct, and maintain a communications network within a public right-of-way.”²⁹ I also understand that a “communications network” means “a component or facility that is, wholly or partly, physically located within a public right-of-way and that is used to provide video programming, cable, voice, or data services.”³⁰ I am not aware that Netflix has any components or facilities that are physically located in any way within a public right-of-way in Texas.

40. I also understand that *PURA* authorizes “the construction or operation of a cable or video services network in the public rights-of-way.”³¹ I am not aware that Netflix has constructed or operates any network in the public rights-of-way.

41. Netflix’s content is instead housed on servers called OCAs, and Netflix members can request to access and view that content using their Internet connection provided by an ISP. There are a total of 312 OCAs located in Texas in 60 locations from which Netflix members can

²⁹ *PURA* § 66.010(a).

³⁰ *PURA* § 66.002(4).

³¹ *PURA* § 66.002(5).

request to stream content over the Internet using their Internet connection through an ISP.³² 213
of these OCAs are located at IXP sites, and the other 99 OCAs are embedded within ISP networks.
None of these OCAs is in the City, and none of these OCAs is located in any public right-of-way
in Texas.

**B. Netflix Does Not Provide Its Content Over or Otherwise Use Any
Wireline Facilities or Networks in the Public Rights-of-Way**

42. Netflix also does not provide its content over or otherwise use wireline facilities,
networks, or other equipment that are in any public rights-of-way in the City or in Texas, as those
terms are understood in the industry.

43. The general industry understanding is that the use of public rights-of-way turns on
physical access to that right-of-way for the purpose of constructing a network. The common usage
of the term “occupy” or “use” relates to constructing, repairing, maintaining, or operating physical
equipment (*e.g.*, poles, cables, pipes) in the right-of-way. A video service network, for example,
refers to physical assets, not the content that traverses those physical assets, and there is widespread
acceptance in the industry that the term “facility” refers to something physical that is owned or
leased.³³ Right-of-way fees are similarly understood to relate to physical access, and the
permitting process for installing facilities has always been based on the physical use of the right-
of-way, not on the electrical or optical signals that go over or through wires or cables in that right-
of-way.

³² NETFLIX_NEW BOSTON_0000318.

³³ “Facilities-based competition . . . refers to competition among providers who actually own the physical facilities underlying communications networks.” Blevins, John, “A Fragile Foundation – The Role of ‘Intermodal’ and ‘Facilities-Based’ Competition in Communications Policy,” Alabama Law Review, Vol. 60:2:243, https://www.law.ua.edu/pubs/lrarticles/Volume%2060/Issue%202/Blevins-A_Fragile_Foundation.pdf, last accessed June 18, 2021.

44. This industry understanding is supported by a long federal history reinforcing the link between franchise fees and physical occupancy of the municipal right-of-way, such as articulated in the *FCC 2007 Local Franchising First Order*³⁴ and in the *FCC 2019 Local Franchising Third Order*.³⁵

45. This industry understanding is also consistent with the stated purpose of a franchise under *PURA* Chapter 66, which “authorizes the construction and operation of a cable or video services network in the public rights-of-way.”³⁶ *PURA* also refers to maps and records that must be provided by the company at a municipality’s request to identify where the network occupies the public rights-of-way:

. . . a municipality may request maps and records maintained in the ordinary course of business for purposes of locating the portions of a communications network that occupy public rights-of-way . . .³⁷

I understand that a video service provider’s “network” in Texas can also refer to “the optical spectrum wavelengths, bandwidth, or other current or future technological capacity used for the transmission of video programming over wireline directly to subscribers within the geographic area within the municipality . . .”³⁸ From an industry operator perspective, this language describing “optical spectrum wavelengths, bandwidth, or other current or future technological

³⁴ “One of the primary justifications for cable franchising is the locality’s need to regulate and receive compensation for the use of public rights-of-way We thus find that a time limit is particularly appropriate for an applicant that already possesses authority to deploy telecommunications infrastructure in the public rights-of-way.” *FCC 2007 Local Franchising First Order*, ¶ 70 (footnotes omitted).

³⁵ *FCC 2019 Local Franchising Third Order*, ¶ 57 (footnotes omitted). *See also*, “. . . under the Act, cable operators must compensate local governments for accessing public rights-of-way under a statutory framework different from that applicable to telecommunications providers.” *FCC 2019 Local Franchising Third Order*, ¶ 96, fn. 372. *See also, FCC 1998 ECI Order*, ¶ 4.

³⁶ *PURA* § 66.002(5).

³⁷ *PURA* § 66.011(a)(2).

³⁸ *PURA* § 66.011(a)(6)(C).

capacity used for the transmission of video programming over wireline directly to subscribers within the geographical area within the municipality” is defining a combination of fiber optic and/or coaxial cables that provide bandwidth to deliver video programming directly to subscribers. These are physical facilities that occupy rights-of-way to reach subscribers. Netflix does not construct fiber optic or coaxial cable systems to reach subscribers with its content, and Netflix thus does not have such a network.

46. Texas law further requires a franchisee to provide a “service area footprint” as part of the application process to obtain a franchise:

(4) a description of the service area footprint to be served within the municipality, if applicable, otherwise the municipality to be served by the applicant, which may include certain designations of unincorporated areas, which description shall be updated by the applicant prior to the expansion of cable service or video service to a previously undesignated service area and, upon such expansion, notice to the commission of the service area to be served by the applicant;³⁹

47. A “service area footprint,” as that term is generally understood in the communications industry, refers to a static geographical service area served by a network occupying the public rights-of-way. Based on common industry understanding, Netflix does not occupy, use, or otherwise impact the public rights-of-way in the City or in Texas, and Netflix does not have a static “service area footprint.”

48. Netflix, to my knowledge, does not construct, install, place, maintain, operate, repair, replace, own, manage, work within, occupy, or control any wireline facilities, networks, or other equipment in any public rights-of-way within the City or other municipalities within Texas.⁴⁰ Because Netflix has no facilities in any public rights-of-way in the City or in Texas, Netflix cannot provide its content over such facilities. Instead, Netflix members request to stream Netflix content

³⁹ PURA § 66.003(b)(4).

⁴⁰ *Smith Declaration*, ¶ 6. See also, *Malafara 4/29/21 Deposition*, p. 107:5-21.

through their ISPs, and the content is transmitted from an OCA by an ISP over that ISP's physical network.

49. I am not aware of any industry participants that have ever believed streaming content providers like Netflix occupy or use the public rights-of-way for purposes of franchise fees. There is no generally accepted industry interpretation that would allow the conclusion that Netflix has or uses physical equipment, facilities, or networks in the public rights-of-way in Texas.

V. Netflix Does Not Have Service Addresses

50. Plaintiff states that “the video service provider fee is based upon gross revenue derived from the flat monthly subscriptions of subscribers with service addresses located in New Boston within any given quarter.”⁴¹ I understand that *PURA* does not use or define the phrase “service addresses.”

51. The term “service address” in the telecommunications industry, however, generally relates to the location where a service is used or provided.⁴² It is generally considered to be “the

⁴¹ Brief, p. 5. *See also, PURA* § 66.005(a)-(b).

⁴² “A service address in general is where a service is being consumed.” *Malfara 4/29/21 Deposition*, p. 99:1-2. Mr. Malfara’s testimony is consistent with testimony Mr. Malfara previously provided in another proceeding in which we both testified. That proceeding involved, among other things, questions regarding the service address at which a customer of BellSouth was receiving 911 service. In that proceeding, Mr. Malfara testified that “[t]he ‘location’ referenced in the 100-line cap is the address at which a customer’s telephone is located and from which that telephone is connected through a BellSouth standard Network Interface, to a BellSouth central office by an ‘exchange access facility.’” *See, Exhibit 4 to Malfara 4/29/21 Deposition*. Cited as United States District Court Eastern District of Tennessee at Chattanooga, Hamilton County Emergency Communications District, et al. Plaintiffs, vs. BellSouth Telecommunications, LLC, d/b/a AT&T Tennessee, Defendant, Case Nos. 1:11-CV-330, et al., Declaration of David J. Malfara, Sr., September 1, 2017, ¶ 3.C.

street address of the location where service is provided.”⁴³ Cable operators, such as Charter Spectrum, for example, define a service address as “the physical address where services are installed or will be installed.”⁴⁴ Similarly, Comcast’s Xfinity service has numerous references to looking up service outages based on a service address.⁴⁵ A service address is required for facilities-based cable operators because they need to perform work at the subscriber’s premise, such as installing equipment, testing service, and maintaining hardware, and the service would not work without a fixed, physical address associated with the provision of service to the subscriber.

52. The generally accepted understanding of “service address” in the telecommunications industry does not apply to Netflix’s streaming service. A Netflix subscriber does not need any physical equipment or physical service from Netflix to stream Netflix content.⁴⁶ Netflix’s service is not tied to any particular location or address, and Netflix customers can stream content wherever they are in the United States, as well as in approximately 190 countries, so long as they have a broadband Internet connection. Moreover, it is not possible to precisely determine the city in which a user is streaming content at any particular time based on the IP addresses associated with that viewing session.⁴⁷

⁴³ Harry Newton and Steve Schoen, *Newton’s Telecom Dictionary*, (New York: Harry Newton, 2018), p. 1133.

⁴⁴ Spectrum, “How to Order Spectrum Services Online,” Spectrum Support, <https://www.spectrum.net/support/manage-account/online-ordering-reference/>, Spectrum Support, last accessed June 18, 2021.

⁴⁵ Comcast Xfinity, “How to Change, Move or Cancel Your Xfinity Services,” Xfinity Support, <https://www.xfinity.com/support/articles/cancel-my-xfinity-services>, last accessed June 18, 2021.

⁴⁶ *Smith Declaration*, ¶ 6. See also, *Malfara 4/29/21 Deposition*, pp. 96:18-97:3.

⁴⁷ *Malfara 4/29/21 Deposition*, p. 108:6-22. See also, <https://www.bigdatacloud.com/blog/how-accurate-can-ip-geolocation-get>, last accessed June 18, 2021. “IP Geolocation is categorically not suitable for tracking the exact geographical location of a person or device.”

53. “Service address” as used in the telecommunications industry also does not mean the same thing as “residential address,” as Ms. Elizabeth Lea, the city manager for the City of New Boston, suggests.⁴⁸ Communications companies, including telephone and cable companies, separately track service and billing addresses, and these addresses may be different than the subscriber’s residential address.⁴⁹ Even Ms. Lea acknowledges that the City of New Boston needs to know the location where the City provides service to its constituents.⁵⁰ From my experience, this information is needed in order to dispatch technicians in the event of installation, maintenance, and repair activities at the location where the service is physically provided.

54. I also understand that Netflix does not have information related to the residential addresses of its customers.⁵¹ This is not surprising. While Netflix does have billing zip codes for certain of its customers, a billing zip code is not necessarily the same as a residential zip code. And even if it were, a billing zip code does not provide information about the municipality in which the customer resides because Texas zip codes do not correlate to municipal boundaries.

⁴⁸ *Lea Deposition*, p. 58:15-22.

⁴⁹ Spectrum, for example, informs customers that “Your service address is the physical address where Spectrum services are installed or will be installed. The billing address is the address you’d like your billing statement sent to and may differ from your service address.” <https://www.spectrum.net/support/manage-account/online-ordering-reference/>, last accessed June 18, 2021. *See also*, Mr. Malfara incorrectly suggested that a service address, in the context of traditional cable services, could be where “the bill is sent to.” *Malfara 4/29/21 Deposition*, p. 100:14-25. This contradicts his earlier statement where he said: “[a] service address in general is where a service is being consumed.” *Malfara 4/29/21 Deposition*, pp. 98:24-99:2. Every cable company I have worked with recognizes the difference between a service address and a billing address (as explained by Spectrum above).

⁵⁰ *Lea Deposition*, pp. 58:15-59:4.

⁵¹ *Long Declaration*, ¶ 15.

Figure 1
Distribution of Texas Zip Codes Across Municipalities and Unincorporated Areas⁵²

55. As indicated in the above chart, more than 77% of zip codes in Texas span multiple municipalities and unincorporated areas. Even assuming that billing zip codes were an accurate proxy for where the Netflix customer resides and for where Netflix service is actually being consumed (which they are not), the fact that the majority of zip codes in Texas span multiple

⁵² Zip code boundaries are based on the geographic files provided by the US Census Bureau. To determine the number of municipalities and unincorporated area(s) a zip code covers, I implemented a 1% household threshold (by total households within the given zip code) to remove “false positives” where municipalities and unincorporated area(s) appear to intersect additional zip codes despite negligible overlap. *See, Exhibit SET-C for a detailed listing of municipalities and unincorporated area(s) associated with each zip code as well as the providers offering service in those intersections.*

municipalities and unincorporated areas makes it nearly impossible to determine the exact municipality in which most subscribers reside.

VI. The Industry Generally Understands that Franchise Fees Apply Only to Closed Transmission Paths That Are Not Used to Deliver Netflix Content

56. Since at least 1996, it has been generally accepted in the industry that franchise fees apply only to providers that (1) have physical facilities in the public rights-of-way of the municipality in which service is provided and (2) deliver so-called “video programming” over a closed transmission path.⁵³ A “closed” transmission path refers to specific channels or groups of channels that only allow a user to watch what the provider makes available.

57. Cable service and fiber-to-the-home service, and hybrids of fiber and coax or copper cable, such as AT&T’s U-verse, are the primary examples of providers that meet this definition. Cable, fiber-to-the-home, and hybrid providers install physical equipment in the rights-of-way of the cities they serve, and they deliver video programming over channels (*i.e.*, closed transmission paths) using a cable modem termination system for cable or hybrid fiber-coax service, an optical line terminal for fiber-to-the-home service, or digital subscriber line access multiplexer for hybrid fiber-copper service. For all of these platforms, there are separate portions of the transmission platform broken into channels that enable closed communication with the cable or fiber-to-the-home customers.

58. Netflix, in contrast, does not have any facilities in the public rights-of-way and does not have any facilities or equipment similar to those operated by a cable provider (*e.g.*, cable modem termination system, optical line terminal, coaxial or fiber cables, and the premises

⁵³ *1996 Communications Act*, §§ 602(5), 602(7).

equipment that communicates with these facilities and equipment). Netflix's content is also provided only over the Internet, not the closed transmission paths of a cable system. The Internet is fundamentally not closed in that it allows users to access a vast amount of information and content made available by a wide variety of sources (e-mail, websites, audio content, video content, written content, *etc.*). In this way, Netflix is no different than other content providers such as Amazon Prime, ESPN+, YouTube TV, and many others, all of which are exclusively available over the Internet and do not function within the closed transmission paths of cable systems. Based on the general industry understanding, therefore, Netflix's service is not the subject of franchise fees.

VII. It Cannot Be Determined on a Class-Wide Basis Whether There Are Wireline Facilities Located at Least in Part in the Public Rights-of-Way in Each Texas Municipality Through Which ISPs Could Transmit Netflix Content

59. My understanding is that Plaintiff contends that Netflix provides "video service" in all Texas municipalities because Netflix content is viewed in each municipality over wireline facilities *controlled by others* and which are at least in part in the public rights-of-way. However, the ISPs, not Netflix, transmit Netflix content to users, at the user's request, and Netflix has no wires, cables, or other infrastructure in the public rights-of-way in Texas.

60. Even if one were to conclude (incorrectly) that Netflix "provides video service" when its content is retrieved by viewers through the facilities of *others* with wireline facilities located at least in part in the public rights-of-way, it is not the case that Netflix's content always transits such wireline facilities. Rather, determining whether a particular municipality is served by an ISP that has wireline facilities in the public rights-of-way of that municipality would require

an individual and detailed investigation for each particular municipality regarding which ISPs offer service in that municipality and which, if any, of those ISPs offer wireline Internet access.

61. Based on available data, there are areas in Texas that are not served by any ISPs that deliver Internet service using wireline technologies. For example, and as seen below, the following rural municipalities in Texas do not have wireline broadband facilities available: Alba Town, Austwell City, Brownell City, Callisburg City, Cashion Community City, Celeste City, Chireno City, Coupland City, Coyote Flats City, Daisetta City, Dodd City Town, Dorchester City, Hawk Cove City, Jolly City, Kendleton City, Kurten Town, Leroy City, Liverpool City, Miller's Cove Town, Nevada City, Neylandville Town, Nordheim City, Novice City, Orchard City, Petronila City, Powell Town, Rice City, Rocky Mound Town, Ross City, Skellytown Town, South Frydek City, Stockdale City, Taylor Landing City, Tira Town, Webberville Village, and Windom Town.⁵⁴ Netflix users in these areas would not be able to stream Netflix content using wireline ISPs and would instead need to stream content using fixed wireless, mobile, or satellite technology.

⁵⁴ FCC's Fixed Broadband Deployment dataset.

Figure 2
Municipalities With No Wireline Access or Sub-Broadband Wireline Access⁵⁵

62. Even in Texas municipalities where there is some wireline broadband Internet service, many households do not have the opportunity to access such wireline service. In the following scatter chart, the X-Axis represents each of the municipalities in Texas. The Y-Axis identifies the percentage of that municipality that has wireline connectivity, based on FCC data. The dots at 0% show those municipalities that have no wireline broadband available. The dots between 0% and 100% identify municipalities where not all of the households have access to wireline broadband.

⁵⁵ FCC's Fixed Broadband Deployment dataset.

Figure 3
Scatter Plot of Wireline Broadband Availability by Municipality⁵⁶

VIII. It Cannot Be Determined on a Class-Wide Basis Whether (and to What Extent) Wireline Facilities in the Public Rights-of-Way in a Particular Texas Municipality Are Being Used by ISPs to Transmit Netflix Content

63. Even in Texas municipalities that are served by one or more ISPs that use wireline technology, it cannot be assumed that Netflix content is being transmitted by *those* ISPs to Netflix customers over wireline facilities in the public rights-of-way of those municipalities. As already discussed, many households in such areas are still not served by wireline ISP providers. In addition, several other types of ISPs provide broadband service without relying on wireline facilities in the public rights-of-way of the particular municipality.

⁵⁶ FCC's Fixed Broadband Deployment dataset.

A. Many Internet Technologies in Texas Do Not Use Wireline Facilities in the Public Rights-of-Way of a Particular Municipality

64. There are more than 200 ISPs using different technologies to provide Internet access (e.g., fiber, cable, DSL, satellite, mobile wireless, and fixed wireless) to various parts of Texas. All municipalities in Texas are served by ISPs that offer satellite service that do not use wires or cables in the city's public rights-of-way. All municipalities in Texas are served (at least in part) by mobile service providers, and many areas of Texas are served by ISPs that deliver Internet access using fixed wireless technology. These types of ISPs do not, or at least may not, rely on wireline facilities located at least in part in the public rights-of-way of a particular city, as described below. As a result, Netflix content delivered over these ISPs is not being transmitted by those ISPs using wireline facilities in the public rights-of-way of the municipality at issue.

65. Plaintiff's expert, Mr. Malfara agrees. Mr. Malfara states that "all such wireline methods of content delivery rely on transmission of high-speed data over publicly-owned rights of way."⁵⁷ During his deposition, however, Mr. Malfara testified:

Q. If . . . I asked you whether the following statement is true: All methods of content delivery rely on transmission of high-speed data over publicly owned rights-of-way, would you agree or disagree?

A. Disagree.⁵⁸

66. Mr. Malfara then testified that methods of content delivery that may not rely on the transmission of high-speed data over publicly owned rights-of-way include, for instance, direct satellite technologies, short hop mobile, and (potentially) fixed wireless.⁵⁹ Mr. Malfara thus

⁵⁷ *Malfara Report*, ¶ 15.

⁵⁸ *Malfara 4/29/21 Deposition*, p. 146:8-15.

⁵⁹ *Id.*, pp. 148:3-149:17.

appears to agree that Netflix content can be retrieved by customers using technologies other than wires or cables in the public rights-of-way of a municipality.

1. Satellite Providers

67. According to the FCC's data, ViaSat, VSAT, and Hughes all provide satellite Internet access in the City, and ViaSat, VSAT, and Hughes all provide satellite Internet access everywhere in Texas.⁶⁰ ISPs that transmit Netflix content using satellite technology do not rely on the use of public rights-of-way in the particular Texas municipality at issue for the transmission of video content. These providers instead rely on transmitting signals from satellites to equipment installed on the subscriber's property without accessing the rights-of-way of the municipality at issue. Netflix users that rely on a satellite ISP connection to stream Netflix content are not receiving content transmitted through wireline facilities located in the public rights-of-way of the particular Texas municipality, and determining whether and to what extent these satellite ISPs are transmitting Netflix content in a particular jurisdiction would require an investigation by municipality into which Netflix users in that municipality have a satellite Internet connection and whether that satellite Internet connection is used to stream Netflix content. Ultimately, this would require a user-by-user investigation as well as a municipality-by-municipality investigation.

2. Mobile ISPs (Commercial Mobile Service)

68. A number of mobile ISPs provide Internet access in the City and throughout Texas. Mobile ISPs in the City include AT&T Mobility, Legacy Sprint & T-Mobile and Verizon. Mobile ISPs in Texas include the same carriers AT&T Mobility, Legacy Sprint & T-Mobile and Verizon, as well as ClearTalk, Cross Valliant Cellular, Evolve Broadband, United States Cellular

⁶⁰ FCC's Fixed Broadband Deployment dataset.

Corporation, and West Central Wireless. These ISPs offer service to 99.9% of households in the state. Netflix users can rely on a mobile ISP connection to stream Netflix content.

Figure 4
Mobile ISPs⁶¹

69. Mobile ISPs can provide service without ever touching the rights-of-way in a specific municipality. In particular, the wireless signals can travel from wireless towers outside a municipality to customers within a municipality without traveling through any wireline facilities in the public rights-of-way of that municipality. Even if some of these ISPs may connect their wireless towers to their core network using wireline facilities (as opposed to microwave facilities)

⁶¹ FCC's Mobile Broadband Deployment dataset.

in certain public rights-of-way, those wireline facilities traverse some municipalities but not others, such that the wireless signals that transmit data, including Netflix content, to customers can reach customers without accessing any wireline facilities in the public rights-of-way of the municipality at issue.

70. These companies provide nearly ubiquitous coverage throughout Texas, competing with each other for customers. Figure 5 that follows shows the number and percent of households served by mobile ISPs in Texas:

Figure 5
Households Served by Mobile ISPs in Texas⁶²

| Provider | Households with Service Available | | |
|------------------------------------|-----------------------------------|-----------|------------|
| | 4G | 5G | Total |
| AT&T Mobility | 10,100,093 | 552,632 | 10,100,093 |
| ClearTalk | 16,993 | - | 16,993 |
| Cross Valliant Cellular | 1,563 | - | 1,563 |
| Evolve Broadband | 70,195 | 51,624 | 121,819 |
| Sprint | 9,620,949 | - | 9,620,949 |
| T-Mobile | 10,012,138 | 8,295,556 | 10,021,744 |
| United States Cellular Corporation | 70,580 | - | 70,580 |
| Verizon Wireless | 10,059,781 | 9,152 | 10,059,781 |
| West Central Wireless | 142,288 | - | 142,288 |

| Provider | Percent of Households in Texas | | |
|------------------------------------|--------------------------------|-------|--------|
| | 4G | 5G | Total |
| AT&T Mobility | 100.0% | 5.5% | 100.0% |
| ClearTalk | 0.2% | 0.0% | 0.2% |
| Cross Valliant Cellular | 0.0% | 0.0% | 0.0% |
| Evolve Broadband | 0.7% | 0.5% | 1.2% |
| Sprint | 95.2% | 0.0% | 95.2% |
| T-Mobile | 99.1% | 82.1% | 99.2% |
| United States Cellular Corporation | 0.7% | 0.0% | 0.7% |
| Verizon Wireless | 99.6% | 0.1% | 99.6% |
| West Central Wireless | 1.4% | 0.0% | 1.4% |

71. Determining whether and to what extent these mobile ISPs are delivering Netflix content would require an investigation by municipality into which Netflix users in that municipality have a mobile Internet connection and whether that mobile Internet connection is used to stream Netflix content. As just one example, Netflix users may use their mobile ISPs for all their Internet access, and either watch Netflix on a mobile phone or tablet or cast Netflix content to their TVs using any number of devices such as Google Chromecast, Amazon Fire TV, or smart televisions.

⁶² FCC's Mobile Broadband Deployment dataset.

3. Fixed Wireless ISPs

72. Based on FCC data, while there are no fixed wireless providers in the City, there are 155 fixed wireless providers in the State of Texas including, for example, AMG Technology Investment Group and JAB Wireless. These providers make fixed wireless service available to over 5.25 million households in the state (51.97% of households in the state of Texas). The following map illustrates the physical area of Texas served by at least one of these 155 fixed wireless providers. Netflix users can rely on a fixed ISP connection to stream Netflix content.

Figure 6
Fixed Wireless Coverage⁶³

73. ISPs that provide Internet access using fixed wireless technology can transmit Netflix content without using wireline facilities in a particular municipality. For example, fixed wireless networks can use antennas in one municipality to provide service to another municipality without having any physical equipment in the other municipality.⁶⁴ To demonstrate the point,

⁶³ FCC's Fixed Broadband Deployment dataset.

⁶⁴ The same conclusions reached here regarding fixed wireless networks equally apply to mobile wireless network infrastructure.

registered antenna structures used to deliver fixed wireless service are located in Lancaster city, DeSoto city, and Cedar Hill city; however, there are three incorporated nearby cities (Glenn Heights city, Ovilla city, and Oak Leaf city) that do not have any FCC registered wireless antennas within their geographical boundaries. Nevertheless, all report 50 Mbps or better fixed wireless service.

74. The map below shows all municipalities in Texas in which there is no registered antenna structure, yet as shown by the prior figure, most of these areas have access to fixed wireless service.

Figure 7
Municipalities with No Registered Antenna⁶⁵

75. It is not, therefore, possible to generalize and say that content streamed in one municipality using fixed wireless technology has traversed the public right-of-way in that municipality. Determining whether wireline facilities in the municipality at issue are used would require identifying where each fixed wireless ISP that serves a particular municipality has

⁶⁵ FCC Antenna Structure Registration (ASR) database for Texas where “Registration Status” is “Constructed.”.

infrastructure and then whether particular subscribers in that municipality use that Internet connection to stream Netflix content.

B. Netflix Users Can and Do Stream Content at Different Locations

1. Netflix Subscribers Stream Content at a Variety of Locations

76. As previously stated, Netflix's content can be accessed by anyone with an Internet connection, anywhere, at any time, and on any compatible device. This includes all ISP categories, whether wireline, satellite, mobile, or fixed wireless. Half of all Netflix users watch Netflix on their mobile phones in any given month.⁶⁶ According to a Netflix survey, two-thirds of Americans stream movies and TV shows in public⁶⁷ and as illustrated below, a significant portion of that occurs while traveling.

⁶⁶ Dano, Mike, "Netflix: Half of all users watch video on phones, but only 10% of total viewing is mobile," *Fierce Video*, February 24, 2016, <https://www.fiercevideo.com/online-video/netflix-half-all-users-watch-video-phones-but-only-10-total-viewing-mobile>, last accessed June 18, 2021.

⁶⁷ Chokshi, Niraj, "Americans Are Watching Netflix at Work and in the Bathroom," *New York Times*, November 17, 2017, <https://www.nytimes.com/2017/11/17/business/media/watch-netflix-at-work.html>, last accessed June 18, 2021.

Figure 8
Netflix Public Viewing⁶⁸

Where We Watch

The places Americans view TV and movies, as a share of those who admit to watching in public.

By The New York Times | Source:
Netflix/SurveyMonkey

77. Given Netflix members' propensity to view Netflix while traveling, it is likely that the viewing experience traverses multiple municipalities and uses multiple types of ISPs (wireline, fixed wireless, satellite, and mobile). Even when Netflix users do use wireline ISPs to stream content, they may do so entirely outside the city in which they have their residence because they are traveling or working in another location.

⁶⁸ Chokshi, Niraj, "Americans Are Watching Netflix at Work and in the Bathroom," *New York Times*, November 17, 2017, <https://www.nytimes.com/2017/11/17/business/media/watch-netflix-at-work.html>, last accessed June 18, 2021.

2. Most Netflix Accounts Have Multiple Users in Different Households

78. Netflix offers three different packages that are distinguished by quality and number of screens a subscriber can watch at the same time. The basic subscription allows for a single viewer, while a standard subscription allows two viewers and premium subscription allows a maximum of four viewers at any time:

Figure 9
Netflix Subscription Options⁶⁹

| | Basic | Standard | Premium |
|--|--------|----------|---------|
| Monthly cost* (United States Dollar) | \$8.99 | \$13.99 | \$17.99 |

| Unlimited movies and TV shows | ✓ | ✓ | ✓ |
| Watch on your laptop, TV, phone and tablet | ✓ | ✓ | ✓ |
| HD available | | ✓ | ✓ |
| Ultra HD available | | | ✓ |

79. According to S&P Global Market Intelligence, 61% of Netflix members subscribe to plans that allow at least one or more concurrent viewers, while only 34% of subscribers subscribe to plans that only allow one viewer to watch content at a time.

⁶⁹ Netflix, “Plans and Pricing,” *Netflix Help Center*, <https://help.netflix.com/en/node/24926>, last accessed June 18, 2021.

Figure 10
Netflix Subscriptions by Tier⁷⁰

80. The basic plan only allows for one viewer, but that does not mean that the password cannot be shared. Netflix does not employ two-factor authentication, making sharing passwords easier.⁷¹ Password sharing outside of members of a household is commonplace, as illustrated by the survey results below:

⁷⁰ Fletcher, John, "Which Netflix Plan do you have?" *S&P Market Intelligence*, May 2, 2019, <https://platform.marketintelligence.spglobal.com/web/client?auth=inherit#news/article?id=51387966>, last accessed June 18, 2021.

⁷¹ Two-factor authentication generally refers to requiring two distinct forms of identification to be granted access. Often in addition to a username and password, a website will send an expiring code to a cell phone or email address to be entered as an additional layer of security.

Figure 11
Netflix Password Sharing Survey Results⁷²

81. As the above chart indicates, nine percent of subscribers share their account with a child that does not live at home (whether it be a student away for college⁷³ or at boarding school) or an adult who has moved out of the home. Another 26 percent of subscribers share their account with a family member not in their immediate family, and 18 percent share their account with a friend.⁷⁴ Put another way, the majority (53 percent) of Netflix subscribers share their passwords with someone outside their household.

⁷² Parker, William, “Survey: 54% of Netflix Subscribers Share Their Account with People Outside Their Homes,” *Kill the Cable Bill*, November 5, 2020, <https://www.killthecablebill.com/netflix-survey-password-sharing/>, last accessed June 18, 2021.

⁷³ Parents giving their college children access to their Netflix account is a common situation. See, Brown, Mike, “Netflix & Millennials: Viewers, Not Subscribers,” *LendEDU*, April 6, 2017, <https://lendedu.com/blog/netflix-millennials-viewers-not-subscribers/>, last accessed June 18, 2021.

⁷⁴ *Ibid.*

82. The dynamic nature of where subscribers are actually using streaming service and whose account is actually being used to stream content is further borne out by a survey performed by CordCutting. CordCutting estimated for 2021 that nearly 214.3 million U.S. adults are using at least one streaming service, representing almost 82% of all U.S. adults.⁷⁵ However, only an estimated 60% of users are actually paying for the service, though CordCutting determined that the exact numbers vary by provider.⁷⁶ Specifically for Netflix, CordCutting's survey estimated for 2021 that 13% of Netflix users were accessing the service via another subscriber's account.⁷⁷

83. The prevalence of account sharing introduces additional variety into how and where the content is consumed. The extremely high incidence of password sharing with people outside of the subscriber's home necessarily means that those other viewers of Netflix content are not at the same physical address, and may not be in the same municipality (or even state). Moreover, it is highly likely that many account holders do not even have an idea of how often their password has been shared and how many people are using their account.⁷⁸

IX. It Cannot Be Determined on a Class-Wide Basis Whether (and to What Extent) Commercial Mobile Service Is Being Used to Stream Netflix Content in a Particular Texas Municipality

84. I understand that video service content delivered to customers by "commercial mobile service providers," including mobile ISPs, is not within the scope of the Texas statute,

⁷⁵ Lovely, Stephen, "Subscription Mooching in 2021," *CordCutting*, April 1, 2021, <https://cordcutting.com/research/subscription-mooching/>, last accessed June 18, 2021.

⁷⁶ *Ibid.*

⁷⁷ *Ibid.*

⁷⁸ Emont, Jon, "You've Shared Your Netflix Password With Your Entire Family. Now You Can't Watch Netflix," *Wall Street Journal*, June 8, 2020, <https://www.wsj.com/articles/youve-shared-your-netflix-password-with-your-entire-family-now-you-cant-watch-netflix-11591636619>, last accessed June 18, 2021.

regardless of whether wireline facilities in the public rights-of-way of a particular municipality are being used by the ISP.⁷⁹

85. As already discussed above, determining whether and to what extent mobile ISPs are delivering Netflix content would require an investigation by municipality into which Netflix users in that municipality have a mobile Internet connection and whether that mobile Internet connection is used to stream Netflix content.

X. It Cannot Be Determined on a Class-Wide Basis Whether (and to What Extent) Netflix Content Is Streamed Using ISPs That May Be Exempt from Franchise Fees

86. I understand that there are or may be additional exemptions to franchise fees. For example, I understand that common carriers may be exempt from paying franchise fees insofar as their facilities are used to provide interactive, on-demand services.⁸⁰ I further understand that certain rural local exchange carriers operating on a rate-of-return basis may provide broadband transmission service as a common-carrier service.⁸¹ I understand that interactive services provided by such carriers may be exempt from franchise fees as a result.

87. Connect America Fund Broadband Loop Support (“CAF-BLS”)—a form of federal universal service support intended to promote broadband deployment in rural areas—is available

⁷⁹ The definition of “video service provider” in *PURA* reads as follows: “Video service” means video programming services provided through wireline facilities located at least in part in the public right-of-way without regard to delivery technology, including Internet protocol technology. *This definition does not include any video service provided by a commercial mobile service provider as defined in 47 U.S.C. Section 332(d).*” [Emphasis added] *PURA* 66.002(10). Note that *PURA* points to the definition of commercial mobile service provider found in Federal law.

⁸⁰ *1996 Communications Act* § 602(7)(C).

⁸¹ *FCC 2018 Petition of NTCA*, ¶ 4.

only to rate-of-return carriers. Accordingly, a carrier's receipt of such support is a proxy for a carrier operating on a rate-of-return basis and signals the possibility that the carrier is exempt from franchise fees.

88. The carriers receiving CAF-BLS in Texas include: (1) Alenco Communication; (2) Blossom Telephone Company; (3) Big Bend Telephone Company; (4) Brazoria Telephone Company; (5) Border To Border (6) Community Telephone Company; (7) Dell Telephone Cooperative; (8) Eastex Telephone Cooperative; (9) Electra Telephone Company; (10) Ganado Telephone Company; (11) Guadalupe Valley Telephone Company; (12) ETS Telephone Company; (13) La Ward Telephone Company; (14) Lake Livingston Telephone; (15) Lipan Telephone Company; (16) Livingston Telephone Company; (17) Muenster d/b/a Nortex Communications; (18) Peoples Telecom; (19) Southwest Texas Communications; (20) Tatum Telephone Company; and (21) Valley Telephone Cooperative.⁸²

89. These providers serve, at least in part, 512 zip codes and 230 municipalities in Texas. The map below identifies the service territories of these rural carriers. Determining on what basis these carriers are providing broadband transmission service would require an investigation into each municipality. Likewise, determining whether and to what extent these carriers are delivering Netflix content would require an investigation into which Netflix users in that municipality subscribe to one of these carriers and whether that Internet connection is used to stream Netflix content.

⁸² <https://www.usac.org/wp-content/uploads/high-cost/documents/Tools/ACAM-ACAM-II-and-CAF-BLS-Buildout-Requirements.xlsx>, “CAF-BLS Funded Locations” Worksheet, last accessed June 18, 2021.

Steven Turner

Professional Biography

Steven Turner is a Senior Managing Director in the Telecom, Media, and Technology (“TMT”) industry practice and is Co-Leader of the TMT Dispute Advisory group. He has over 30 years of experience providing expert testimony in a broad range of technical and financial areas covering the engineering and operations of integrated communications networks, transportation systems and transaction investigations. He also leads many of TMT’s due-diligence and performance improvement engagements related to technology, engineering, and network operations, with his work covering the breadth of the TMT industries.

In telecommunications, he and his team provide specific expertise in the wireline (copper, coaxial, fiber, HFC), wireless (4G and 5G) and integrated communications arenas as both industry experts and testifying experts in the U.S. and abroad. In media, Mr. Turner’s work focuses on digital content and distribution systems, often involving an evaluation of capacity and contention issues. In technology, Mr. Turner specializes in transaction applications and technology, including funding mechanisms, cost-of-service analysis, traffic forecasts, and toll road fee structures.

Mr. Turner has testified in nearly 150 separate proceedings on behalf of many of the largest integrated communications carriers, toll roads and other service providers in a variety of jurisdictions on matters related to class certification under Federal Rule 23, industry practices, regulatory compliance, contract interpretation, cost-of-service and pricing, damages, fraud, lost profits, network performance and technical standards and capabilities. Outside of litigation, Mr. Turner leverages his unique combination of engineering, financial, and industry expertise to advise stakeholders on company strategy, acquisitions, divestitures, synergies, and due diligence.

Prior to joining FTI Consulting, Mr. Turner worked at AT&T and held a variety of engineering, operations and management positions overseeing the switching, transport and signaling disciplines. Prior to the passage of the Telecom Act of 1996, Mr. Turner worked in the organization responsible for AT&T’s re-entry strategy into the local infrastructure market and evaluated AT&T’s potential entry alternatives through switch and fiber builds, hybrid fiber-coax service, broadband fixed wireless, and others. Mr. Turner was ultimately responsible for developing AT&T’s market entry network plan for the Southwestern Region and the regulatory issues associated with the unbundling of local exchange company networks.

In 1997, Mr. Turner founded Kaleo Consulting, a boutique consulting firm specializing in providing expert testimony in the engineering and operations of integrated communications networks and market entry strategic consulting services.
